DETAILED ACTION

Election/Restrictions

1. Claims 1 and 18 are generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 11-17 and 20, directed to the species of Figs. 11-14 are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter:

With regard to independent claim 1, none of the prior art references of record disclose or suggest an articulated flag member arrangement including a first flag body that rotates when an object moving in a first direction contacts the first flag body; a second flag body that rotates when an object moving in a direction opposite to the first direction contacts the second flag body, and the first and second flag bodies are rotatable relative to each other and include first and second portions, respectively, arranged relative to each other to interact such that at least one of the first and second flag bodies rotates based on rotation of the other of the first and second flag bodies.

With regard to independent claim 18, none of the prior art references of record disclose or suggest a method, which involves contacting a first flag body with an object

that is traveling in a processing path in a first direction, causing the first flag body to rotate in a second direction and to alter the passing of a signal; and contacting a second flag body with an object that is traveling in a processing path in a direction opposite to the first direction, causing the second flag body to rotate in a direction opposite to the second direction and to alter the passing of the signal, in which at least one of the first and second flag bodies rotates relative to the other of the first and second flag bodies.
